

Bread Slicers

The EGF-18 is designed to be fitted on the shop floor. It is designed especially for compliance with New Zealand safety regulations.

The EGF-18 is a gravity fed machine, with rear safety guard to avoid operator contact with the blades.

This unit is also fitted with castors to provide easy mobility and cleaning

When the operating handle is in use the safety guard covers closely, and a safety loaf pusher passes each loaf completely through the slicer blades.

A packing shelf is provided. It is recommended that the fitted crumb drawer be emptied at regular intervals to prevent mechanical failure.

Both machines are fitted with a safety button to stop operation in case of emergency.

EuroBake

EPC-16

The EPC-16 is designed for the shop counter. A safety guard device is designed especially for compliance with New Zealand safety regulations.

The EPC-16 is safety-protected by an interlocked safety feeding guard which operates in conjunction with a safety loaf pusher system that is powered by a 1/2 HP motor.
